Subject: Inbound - LE Carp October Quarterly Monitoring Report

Hi Rob,

I'm sending down the LE Carp October Quarterly Monitoring Report for your review and comment. The one thing to note is that the apparent free product thickness in MW-3, was .93 feet for October. This is an increase from previous quarterly events. For example, April had an apparent free product thickness of .54 feet. The other bad news is, MW-3 is at the eastern downgradient edge of the free product area, a small part of which may or may not be migrating that way, the good news is, this area is within the prescribed excavation remediation area, if that were to ever get off the ground, and the xylene and ethylbenzene concentrations are down.

If you have any other comments, please send them my way.

Thanks,
Stephen
